Abstract (en)

[origin: EP0082744A1] 1. Continuous-casting machine for metal, comprising a bottomless mould (1), means for oscillating and guiding the mould (1) along a casting line (10), and a cooling jacket mounted on a frame (5) in the form of a beam which is parallel to the casting line (10) and which is provided in its upper part with means (40, 55) for bearing on the top part (41) of a foundation block (4), said means for oscillating the mould (1) comprising a lever (3) connected to an oscillation mechanism and rotating about an axle (30) in bearings carried by fixed supports (31), characterised in that the supports (31) of the bearings of the oscillation lever (3) are fastened to a platform (6) provided on the top part (41) of the foundation block (4) substantially at the upper level of the frame (5) of the cooling.
