Abstract (en)
[origin: EP0082777A1] 1. Container provided with a pouring member obturated by a stopper such as a bottle, particularly in plastic material, designed for single use and for containing a unit dose of a liquid dangerous for the health, characterized in that it comprises a rigid neck (2) acting as pouring member, a bottom (4) and at least semi-rigid lateral walls (3, 3a) ; in that the bottom wall parts (4) are inclined with respect to the axis (5) of the neck (2) and of the container (1) of an angle (alpha, beta) sufficient to prevent said container from standing up, and in that the stopper itself (8) having in a manner known per se an obturating wall (8a) extended towards the bottom (4) by a lateral skirt (8b) is destructible and must be destroyed for opening the container, and is fixed, in tight manner, on the free edge of the neck (2) through the rear or lower end (8c) of the skirt (8b), the lower end (8c) being permanently fixed on said neck edge.
