Abstract (en)  
[origin: EP0083787A2] In the sectional toothbrush, the grip part (3) has an angled, tongue-shaped, conical connection piece (1) which fits into a conical cavity (8) of the brush head. The brush head (5) can be plugged onto the angled connection piece (1) in two opposite positions. By this means, the brush head (5) can be brought into two different angular positions relative to the grip part (3), which results in different contact planes with the teeth surfaces to be cleaned. <IMAGE>
