Abstract (en)
[origin: EP0084018A1] 1. Folding box with a recloseable pouring orifice formed from a cardboard blank, with a front wall (10), a rear wall (12) separated from this by a first side wall (11), a second side wall (13) of the outside of the front wall (10) and an adhesive tab (14) on the outside of the rear wall (12), with covering tabs (15-22) on the remaining edges of the front wall, rear wall and side walls, and with a tear-open tab (60) which is located in the first side wall (11) and which is delimited in the cardboard blank by two first perforation lines (50, 51) extending from the starting point of the covering tab (20) on this side wall (11) and lying in the folding lines (31, 32) between the side wall (11), front wall (10) and rear wall (12), and by a second perforation line (52) extending transversely over the side wall (11), the two first perforation lines (50, 51) lying in the folding lines being of the same length, the second perforation line (52) connecting the end points of the two first perforation lines (50, 51) to one another, and the third perforation lines (53, 54) of equal length lying in the folding lines (36, 37) between the front wall (10) and the associated covering tab (19), on the one hand, and between the rear wall (12) and the associated covering tab (21), on the other hand, and extending from the side wall (11) lying in between, characterised in that the end points of the first and third perforated lines (50, 51; 53, 54) are connected to one another by first folding lines (55, 56) crossing the front wall (10) and rear wall (12) respectively.
