Abstract (en)
[origin: EP0147572A1] The device for storing tablet units and for their individual dispensing has at least one tablet shaft provided in an essentially closed housing for receiving a plurality of tablet units stacked one above the other, whose width is at least equal to the width of a tablet unit and whose depth is at least equal to the length of a tablet unit, and on whose lower end a support bearing is arranged for supporting the stored tablet units. The housing has at the lower end of the tablet shaft a dispensing opening whose width is at least equal to the width of a tablet unit and whose height is at least equal to the height or thickness of a tablet unit, characterised in that the rear wall (8) and/or a side wall (6) of the housing (3) runs out via at least one vertical section of the housing (3) into a side tab (27) which, together with a base (28) extending at right angles to it and, if appropriate, a flange (29) protruding from the base (28), forms a holding compartment (31) for a cleaning container or the like. <IMAGE>
