Abstract (en)

[origin: EP0084302A2] Dispensing device for paper or other materials in sheet form which are rolled on a central hollow cylindrical holder, particularly a toilet-paper dispenser in a roll, which consists of a storage container (1) mounted above a use container (3) into which the stored roll or rolls (2) will automatically fall. The use container (3) comprises a slot (8) allowing only the material to be unwound to pass through and the holder (5) of the material to be unwound when it is empty. A fork piece (9) forming a double straight spindle (9', 9'') is inserted laterally into the device and prevents the first stored roll (2) from falling and serves as a hub for the roll (4) being used. <IMAGE>
