Abstract (en)

[origin: EP0084485B1] 1. Nodal point for the construction of metallic tubes, especially for drilling platforms, characterized in that it comprises, in the tubular element portion (10) on which are welded the tubes (12) constituent of the point of junction, at least one steel stiffening element, comprising a cylindrical main portion (16) coaxial with said tubular element and provided with annular ribs (18), said stiffening element being ferruled inside the tubular element (10) with a ferruling rate sufficient for preventing it from being disunited from the tubular element.

Abstract (fr)

Noeud d'assemblage de structures métalliques tubulaires, notamment pour plates-formes de forage, caractérisé en ce qu'il comporte, dans l'élément tubulaire (10) sur lequel sont soudés les tubes (12) constituant le noeud, au moins un élément raidisseur en acier, comportant une partie principale cylindrique (16) coaxiale audit élément tubulaire et munie de nervures annulaires (18), ledit élément raidisseur étant fretté dans l'élément tubulaire avec un taux de fretage suffisant pour empêcher sa désolidarisation de l'élément tubulaire.
