Abstract (en)

[origin: EP0084642A1] 1. Process for the production of a plastic, characterized in that at least one polymer whose chains contain triarylmethane units as basic units is formed by polycondensation of at least one aromatic aldehyde and at least one aromatic ring system, at least two H atoms in the ring system being replaced by at least two functional groups by means of which the electron density at at least two points in the ring system is increased.
