Abstract (en)

[origin: EP0084747A1] 1. Fastening band for manufacturing garments and underwear articles comprising two elements of a same width, the first one called lower band (20, 21) carrying aligned perforations (24) and the other one called lower band (28) carrying at least one hook (27) provided to penetrate into the perforations (24) of said lower fastening band, comprising a band in various material obtained by superposing a plurality of fabric layers or by suitably bending a same fabric band on itself, characterized in that the lower band (20, 21) inerty comprises at least one suitably placed insert (25) of flexible material, then perforations (24) are made on the upper layer (20) of the lower band (20, 21) between the inserts (25, 39, 43, 50, 63, 70) in order to make reinforcements enabling the blocking of the hooks (27) the curved front part of which is never in contact with the user's skin because of the lower fabric thickness (21).
