Abstract (en)  
Toy printing apparatus comprises a frame 14 adapted to support embossed printing elements 30, a backing plate 16 which can be connected to the frame 14 with a sheet of paper 72 and a sheet of carbon paper 74 sandwiched between the frame and the backing sheet. The frame and backing plate are fed through a pair of rollers 18 and 20 rotated by a handle 64, so that the pressure applied by the rollers causes an impression of the embossed printing elements to be transferred to the paper. The frame 14 has a number of cross-bars 32 and the printing elements 30 slide between the cross-bars so that they can be selectively arranged at different positions in the frame. Larger size printing elements 42 can be mounted on blank elements 38 slidable between the cross-bars.
