Abstract (en)

A support and stop (15) for the upper cymbal of a high-hat cymbal, wherein the upper cymbal (5) is supported on a longitudinally movable supporting rod (9) by means of a bolt (16) with an upper holding nut (17) threadedly secured above it and a lower holding nut (18) threadedly secured beneath it. The upper and lower holding nuts (17, 18) have respective upper and lower terminal openings passing through them which have internal diameters approximating the diameter of the supporting rod (9) and being smaller than the internal diameter of the bolt (16). A clamping screw (8) passes through the upper holding nut (17), pressing the supporting rod (9) against the internal walls of the upper and lower terminal openings and canting the rod (9) in the terminal openings for locking the supporting rod (9) to the support (15). The cymbal (5) passes through a felt ring (4) which is secured to the exterior of the bolt (16) by the lower holding nut (18) below and by a locking nut (1) above, which locking nut (1) is located beneath the upper holding nut (17).
