Abstract (en)

[origin: EP0086355A2] The glove consists of two webs (1, 2) which are connected to each other on three sides (3, 4, 5) and are made of a bactericidal, homogeneous synthetic fabric, the pile threads (11, 12) of which are held on the base fabric (9, 10), are very closely adjacent and are additionally welded to said base fabric. In order to match the respective type of skin, these pile threads can be of different length and/or of different hardness. The open narrow side (6) of the glove is sewn in a tape (7) which is fitted with a hanging ring (8). Highly heat-resistant polyester is primarily used as the material for the glove. <IMAGE>
