Abstract (en)
[origin: EP0086579A1] A building structure comprises an outer shell (10) of adjustable dimensions arranged to define a substantially enclosed space. A section at least of the outer shell (10) has a rigid lower portion (12), and a rigid upper portion (14) movable relative to the lower portion (12) between a lowered position and a raised position. In the lowered position, the two portions (12, 14) overlap to a substantial extent and in the raised position they overlap to a lesser extent. Bolts or clamps (48) are provided for fixing the upper portion (14) relative to the lower portion (12) in the raised position at least.
