Abstract (en)

[origin: EP0087120A1] 1. Mast step arrangement for windsurfing board having a connecting piece (15) for providing the connection between a mast (4) and a windsurfing board (1), the connecting piece (15) being provided below a mast step lower section (14) carrying a universal joint (13) wherein the connecting piece (15) is movable in a captioned condition in the longitudinal direction of the windsurfing board to at least two positions and is lockable in these positions wherein the connecting piece is guided in a track (16) and is shiftable parallel to the deck surface (2) of the windsurfing board, a form-locked releasable coupling (17, 114) for locking the connecting piece in relation to the track being provided which is releasably by means of an actuating member (19, 111) and wherein the actuating member is moving a body (31) being pretensioned in a locking position from recesses provided within the track, characterised in that the actuating member (19, 111) is performed separately from the coupling means (17, 114) positioned in the connecting piece (15, 113) and being remotely positioned therefrom in such a way that the coupling means is actuatable independently from the position of the connecting piece.
