Abstract (en)

[origin: EP0087483A1] 1. Device for a cigarette packing machine for feeding punched, prefolded inner collars (52, 53) of a cigarette packet individually one after the other from the delivery plate (56) of a collar punch to the receiving plate (71) of a packing station, where delivery plate and receiving plate are arranged parallel one to the other and staggered, the special feature being that a feed mechanism (1) is proposed forming an 180 degrees curve, which is connected to and prolongs the delivery plate (56) in feed direction, is connected to the delivery plate (71) in the reverse direction, has a horizontal, stationary slide face (46, 47) as support for the middle section (67) of the inner collar and, for the vertically positioned outer flap (51, 66) of the inner collar (52, 53) has an outwardly abutting, vertical, stationary slide face (49) and, for the upright inner flap (63), two parallel running strands (34, 40) of two endless conveyor-belts (3, 4).
