Abstract (en)

[origin: US4499621A] In a pass-through washing machine, use is made of three-minute rinse cycles. Accordingly, only two chambers are required for four rinsing stages during two wash cycles. The warm first rinse water of the pre-heated, pre-washed laundry is mixed to save time and energy required to heat the liquid mixture. The pass-through washing machine can thus be constructed in a compact form on a frame.
