Abstract (en)

[origin: WO8301078A1] Improvement of a loop-taker of a sewing machine rotating around a shaft (3) fastened to the sewing machine body. The shaft is provided with a cam (6) which meshes with a cam follower (8) on one arm of a double lever arm (19), the other arm thereof supporting a loop-taker tip (10) and a needle guide (11). The position of the loop-taker tip in relation to the loop-taker body can then be changed during rotation enabling a better adaptation of the position of the loop-taker tip to the needle eye.
