Abstract (en)
[origin: EP0088297A2] 1. Electrical fuse-link, more particularly low-voltage high-breaking-capacity fuse-link with a tubular housing (1) made of insulating material, the contact members (31, 32) and fuse-element (2) of which are introduced axially and are supported by projections of the contact members (31, 32), in each case, on an edge of the housing (1), with end plates (9, 10) securing the contact members (31, 32), characterised in that a first front plate (16, 22) at the base of a first contact member (31) is provided with protruding portions (71, 72), which interlock in a form-fitting manner with corresponding counter protruding portions (81, 82) of the housing (1), and is supported in a planar manner in a radially displaced position on the housing edge on supports and in that a second front plate (14, 17) at the base of a second contact member (32), which lies opposite the first contact member (31), is provided with protruding portions (73, 74) in such a way that it is supported in a centered position on supports (5, 18) on the housing (1).
