Abstract (en)
[origin: EP0088430A2] 1. A fin for a windsurfing board, which fin is mounted in a fin-box connected to the windsurfing board and is pivotally movable in said box between two end positions and adapted to be fixed in various angular positions by a resilient detent mechanism, the axle being disposed in the open-bottomed fin-box, characterized in that the axle (7, 8) is constituted by two stub axles (7, 8), which laterally protrude from the fin (3), and each stub axle (7, 8) is held in the fin-box (2) by a releasable coupling device (20), which releases the stub axles (7, 8) in response to a movement beyond one or each end position.
