Abstract (en)
[origin: EP0089281A1] 1. Orthogonal body for a thermostat-regulated valve, for connecting the thermostat-regulated valve to a radiator, provided with a main hollow cylindrical body (1) open at its two ends and a radial pipe (7, 8) receiving the head of the thermostat-regulated valve, characterised in that the body is provided with a second radial pipe (7, 8) which is orthogonal with respect to the former, the two pipes being arranged in a plane perpendicular to the axis of the main body and open out in the centre of the main body and in that a stopper (6, 16) closes off one of the openings (5, 15) of the main body depending on the orientation of the thermostat-regulated valve.
