Abstract (en)

In a method of manufacturing concrete tubes (1) adapted to join one another by means of a sleeve-wedge joint, each time a tubular casting (8) is manufactured in a mould (2). Concrete mortar (7) having a high degree of moisture is densified in a mould cavity (6) by subjecting the mould (2) to vibrations, in order to densify the casting (8) at its top side unto a densifying degree, better corresponding to the densifying degree effected below in the casting, an upper mould part (9) is urged in axial direction of the mould cavity (6) unto its position bounding the mould cavity (6), whilst the mould (2) is subjected to vibrations.
