Abstract (en)

[origin: EP0089462A2] A fastening of in particular transparent double-walled panels to substructures, consisting of angle or T-sections, of greenhouses, halls or the like. To enable displacement of the panels in the event of thermal expansions and consequently to prevent the curving of the panel and cracking at the fastening points, a holder can be fastened to the outwardly directed leg of the T- or angle profile, said holder having a recess extending transversely to the longitudinal direction of the leg and above its longitudinal edge. In this recess, a stirrup to which the panel can be fastened is movably held. <IMAGE>
