Abstract (en)

[origin: EP0089533A1] 1. A stack formed by straddle-nesting corner protector bodies serving for the coordination of packages or the like, in which partial regions of the inner face of each corner protector body are made self-adhesive and the outer face in the region covering these has a reduced adhesion to the layer of adhesive in order to facilitate the removal of the individual corner protector bodies from the cohering stack, characterized in that the corner protector body is made as an angle-batten (1), the selfadhesive partial region (5) are provided on the inner faces on only one side (2) of the angle and the formation for reduced adhesion is made as a continuous impregnation-strip (11).
