Abstract (en)
[origin: WO8203565A1] The water toboggan comprises a sliding corridor (1) formed by substantially arcuated assembled parts, having the shape of a gutter, fixed at least partially to supports (2). At least two radial arms (5) held at different heights project from each support (2) and are appropriately tensioned by upper anchoring elements (7). The connection area of two parts of the corridor is exclusively supported by one of the radial arms (5), of which the free end has a hinged support member for adjustments.
