Abstract (en)

[origin: EP0090300A2] The mobile installation consists of a vehicle (10) in whose loading area the working agents - compressed air, water (24), electrical energy (22), a gas container (34) with a current generator (33) - are combined in such a way that specialist work can be carried out on a work surface (30) using these agents, as can be seen from Fig. 2. In this respect the loading area, now a working area, is connected to an overpressure generator (25) which in turn forces purified air through a filter (26) into the working area and thus satisfies the hygienic requirements for dental work. <IMAGE>
