Abstract (en)

Rail mounting means comprising a bracket (A) which comprises a holder member (1) including at least one locating formation (4, 6a, 6b, 6c). A securing member B is mountable on the holder member 1 by a mounting protrusion (15) on the securing member B engaging through an elongate longitudinally extending mounting slot (8, 11) in the holder member 1. The securing member 8 is pivotable between an unlocked condition in which it is movable longitudinally along the mounting slot (8, 11) towards and away from the locating formation (4, 6a, 6b, 6c) and a locked condition in which the securing member B can releasably clamp a rail (5, 7) against the locating formation (4, 6a, 6b, 6c). A plurality of spaced locating formations (4, 6a, 6b, 6c) may be provided on the holder member (1) for clamping a rail (5, 7) in any one of a plurality of different positions or for clamping plurality of rails (5, 7) in spaced relationship on the holder member (1), a securing member (B) being provided for each rail (5, 7).
