Abstract (en)  
[origin: US4407029A] A reclining platform for bathtub units has a rectangular-shaped reclining platform and four hinged plates joined to the side edges of said reclining platform by means of hinges. The hinges are equipped with springs that press the hinged plates into the same plane as the base plate. The hinged plates can pivot upwards against the tension of the built-in springs. The entire reclining platform has a mat, which forms wedges at the corner recesses between each two hinged plates. The mat consists of a flexible material. The reclining platform covers the entire length of the bathtub, without folds, when the unit is in raised position. When the unit is lowered, the hinged plates abut tightly against the tub walls, and the wedges are folded up and close off the rounded corners of the walls as well. The new unit ensures that handicapped persons cannot get caught.
