Abstract (en)
[origin: US4527141A] A transformer comprising a wound coil former (1) with first and second coil flanges (5) located at opposite ends of the coil former. At least one strip (13) comprising connection eyelets arranged on the first coil flange and connected to winding wire ends (9) emerging from the winding (7). Guide pins (21) are arranged on an edge portion (19) of the second flange which, viewed throughout the surface (17) of the winding (7), is located opposite the flange edge portion (15) of the first flange. The winding wire ends (9) are tensioned around the guide pins and are then guided to the connection eyelets (11) of the connection strip without adhesion.
