Abstract (en)  
[origin: EP0091261A2] A soiled textile article with a visually dominant colour is dry cleaned using a dry cleaning solvent having a liquid vehicle dissolved in the solvent and a dye or pigment, which is substantive for fibres constituting the article, dispersed in the liquid vehicle (the latter vehicle being preferably a detergent). The dye or pigment is such that it colour-matches the visually dominant colour of the article; this causes restoration of the perceived colour of the article, giving it a fresher, cleaner appearance.
