Abstract (en)
[origin: WO8301455A1] The device for extinguishing coke comprises an extinction container (1) provided with walls (15), a bottom (12), a removable cover (2) having on its bottom face sprayers (9) and an exhaust opening (14) for the gases formed during extinction. In the lower part of the extinction container (1), on at least two opposite walls (15), there are provided exhaust openings (14), each of them being connected at a branching (3) and each comprising a grid-shaped retainer (16) extending on their inner section. The grid is preferably adjustable so that it is possible to vary the free passage section. Further, the grid may be arranged in the branching pipe (3) outside the vertical wall of the container so that it is not in contact, or only slightly in contact with incandescent coke.
