Abstract (en)
[origin: US4512658A] The present invention relates to an electrophotographic copier for the repetitive copying of originals. The copier comprises a transport apparatus having two film webs for transporting the original through an exposing station with the original being inserted between these film webs. The film webs of the transport apparatus are securely bonded together along a strip and form in the entry zone in advance of the exposing station a single-sided, Y-shaped pocket for the positioning of the leading edge of the original against the joint seam of the two film webs.
