Abstract (en)  
[origin: WO8303885A1] The light fitting comprises a lamp support (19), a tube 91) surrounding at least one current lead and one fixing device (2) for the tube. The tube is appropriate to be assembled with the fixing device and the lamp support. The tube (1) and the parts intended for the assembly with the ends of the tube are provided with pins (32) and contact bushes (35) arranged for mutual engagement. The pins and the contact bushes have contact surfaces which are concentric between each other and the central axis of the tube. The parts assembled with the tube may thus be rotated about the axis of the latter. Thereby, the light fitting may take different configurations without requiring any wiring operation.
