Abstract (en)
[origin: ES8406052A2] This invention relates to a device for the distribution in regulable proportions of two pasty substances which are contained separately inside a deformable tube. The device comprises a distributor which is mounted so that it pivots inside a cylindrical casing which is integral with a cap fitted on the outlet orifice of the deformable tube. The casing comprises two outlets for the two pasty substances contained in the tube, and a common extrusion orifice. The invention is notably used for the distribution of sun care products comprising a pasty excipient and an active pasty substance.
