Abstract (en)

[origin: EP0092531A2] The invention concerns a method and a device for transport of liquid between two points having a very small or no mutual pressure difference. The liquid is then brought into one end (3) of a hose (2) of a non-rigid material and flows out through the other end (4) which has a less area than the inlet (3), the hose being filled out by the inner over pressure.
