Abstract (en)

[origin: EP0092608A1] 1. Cantilever track rail (1) for suspended monorails, consisting of an upper profiled part (2) and a lower profiled part (3) parallel thereto, the two profiled parts (2, 3) being connected with one another by a middle part (4) with formation of a lateral opening of somewhat C-shaped cross-section which is continuous over the length of the track rail and is defined by two edges extending parallel to and with spacing from one another in the longitudinal direction of the rail and formed on the middle part, and in the region of which opening there are to be arranged behind engaging securing elements, characterised in that extending parallel with and with spacing from the edges of the C-shaped opening there are formed on the two profiled parts (2, 3) and/or on the middle part (4) flanges (5, 6) extending in the longitudinal direction of the rail and facing one another, which extend parallel with and equidistant from the middle part (4) and are situated on the same side in relation to the middle part (4).
