Abstract (en)
[origin: EP0093224A1] The assembly comprises beams (11, 12, 13) of wood or the I profile type with flanges (14, 15) of wood and webs (16) of wire bent in zigzag and interconnecting the flanges (14, 15), and connecting members (17, 18) in which the squarely cut beam ends are insertable and fixable by means of nails (23) which are driven through the walls (19, 24) of the connecting members (17, 18) and the beam (11, 12, 13) disposed therebetween. The connecting members (17, 18) suitably consist of plywood boards (19, 24) which are nailed on opposite sides of spacers (20, 25, 26) which at the same time serve as stops for the beam ends insertable between the boards (19, 24). The truss base connecting member (18) preferably also have a space in which a portion (30) of an eaves overhang (29) is insertable and nailable.
