Abstract (en)
[origin: EP0093236A2] 1. Plug for an apparatus for the electrical connection of a communications cord to a communications apparatus with a casing (3) and a plug carrier component (1), on which a sprung locking piece (2) is constructed which runs towards the outside and which permits snap-in locking with the apparatus, characterised in that the locking piece (2) is constructed as a flexible tongue which is connected rigidly on one side to the plug carrier component (1), which runs in the distance (a) to the external surface (20) of the plug carrier component (1), which is supported with its free end (2a) at a supporting point (16) and which engages under an edge (12), which is provided at a part (3) placed on the plug carrier component (1) in relation to the supporting point (16).
