Abstract (en)

[origin: EP0093294A2] 1. Apparatus for damping the recoil and the vibration of the dolly in percussive riveting processes using a recoildamped dolly with a housing with a smooth innerside, with head piece, centre piece, lower part, setscrews to secure the head piece and the lower part and with an impactabsorbing part arranged inside the housing, characterized in that the impact-absorbing part is screwed into the centre piece (2) as a hydraulic shock absorber (5), and the housing (4) consists of an aluminium body with a contraction tube, and that the interchangeable head piece (10) is screwed with an upper part (1), and the hydraulic shock absorber (5) with the upper part (1) and with the centre piece (2), and that a pin (6) and a plurality of screws (7) are arranged on the lower part (3) as protection against torsion.
