Abstract (en)  
[origin: ES275116U] Container for materials capable of flow, consisting of side walls joined to one another in the form of a tube by at least one longitudinal weld seam, and front walls, which are placed next to the ends of the tube, form the bottom and the lid of the container, and of which a front wall, which forms the lid, consists of thermoplastic synthetic material without support material, is attached injected along its outer edge next to the side walls, and has an arrangement of pouring down towards the inside of the outer contour of the container, and the other front wall, which constitutes the bottom, is quadrangular, and has triangular lobes folded in support in at least one contiguous sector, the side walls and the bottom consisting of material of support, for example cardboard, covered at least on one side with thermoplastic synthetic material, characterized in that at least two triangular lobes of the bottom, opposite each other, are folded around the bottom edge between the bottom and the side wall inward towards the bottom plane or outward towards the side wall, and are fixed in this position.
