Abstract (en)

1. An element providing a thermal insulation on the outside of a wall (17), comprising an outer facing panel (1), a thermal insulating panel (3) interposed on the inner side of the outer facing panel in confronting relation to the wall to be insulated so as to define an empty space (8) between the thermal insulating panel (3) and the inner side of the facing panel (1), and means for fixing to the wall (17), characterized in that the fixing means are formed by at least one support element (2) having an elongated body (9) fixed vertically to the inner side of the facing panel (1), terminating, in its upper part, in a U-shape fixing lug (10) having branches parallel to said body and connected to the latter at the base of the lug by a planar surface (11) which is raised relative to the body (16) thereof located adjacent to the wall being adapted to be fixed directly to said wall, and, in its lower part in a hogking lug (12) which projects downwardly from the body, this hooking lug having a planar surface (13) which is raised relative to the body in confronting relation to the wall and contained in the same plane as the raised surface (11) of the base of the fixing lug, these raised surfaces (11) and (13) constituting bearing surfaces for the thermal insulating panel (3) and defining an empty space (8) between the inner side of the facing panel and the thermal insulating panel.

Abstract (fr)

La présente invention est relative à un élément d'isolation thermique par l'extérieur d'une paroi (17), comprenant un panneau (1) de parement extérieur, un panneau (3) isolant thermique interposé du côté interne du panneau de parement extérieur, en regard de la paroi à isoler, de façon à ménager un espace vide (8) entre le panneau (3) isolant thermique et la face interne du panneau (1) de parement, et des moyens de fixation à la paroi (17).
