Abstract (en)
A hospital bed or trolley is of the radius arm type in which the base (10) the radius arms (14, 16) and the platform (32) supporting the mattress form a generally parallelogram linkage, and the mechanical jack (30) of the canting plate type displaces a tie rod (22) connecting the radius arm to raise the mattress frame. One of the canting plates (70) wedge-locks the tie rod and has to be tilted to allow lowering of the mattress, and the invention provides a simple construction without any connection between the two pedals.
