Abstract (en)

The instant invention relates to a woman's sandal of good quality but which may be economically manufactured as it is made up of simple, premoulded parts which are quickly and easily put together without the need for specialized machinery or skilled labour. The rapidity and ease with which the herein described sandal is assembled is due to the fact that a rigid plastic insert (1) is applied under the insole (3) and this serves both to support and centre the heel (2) which is held in place by a pin (5) which, under pressure, is threaded through the top piece (6) and heel (2) until it fits into an appropriately holed heel-shaped protusion (1e) found on the under side of the aforesaid rigid insert (1).
