Abstract (en)

[origin: EP0095718A2] 1. An insulating jamb element (1) for the outer wall region of openings of buildings, characterized by an insulating plate (2), a damp-proof plate (3) securely joined to the latter and, applied to the damp-proof plate (3), a layer of a filling material (4) with an embedded reinforcement fabric (5), the edge area of the jamb element (1) which projects into the building opening in the intended position being offset stepwise and the portion (9) which projects in this way comprising at least part of the thickness of the insulating plate (2), and forming the inner edge termination (6) of the jamb element (1).
