Abstract (en)
[origin: EP0095957A1] 1. Electrical connector for windings of dynamoelectrical machines adapted to connect free insulated conductive wires (4) to a printed circuit, characterized in that it comprises electrically insulating support means (1, 2) that hold in place the initially free insulated wires and conducting terminal-conductors (3) whereon the insulation is displaced at a selected location along the free length of each wire (4) and connection is established to a printed circuit card inserted into the connector.
