Abstract (en)
[origin: EP0096229A1] 1. Lock for a door, a window or the like, with a key operable gearing with profiled or lock barrel (6) for the actuation of at least one bolt (4) and/or latch (3) as well as possibly at least one additional lock member on a drive rod (8, 9), the lock barrel being removably pushed into a radially slotted annular gearwheel (10) and the gearwheel (10) which is adapted to be driven directly by the drive nose (12) of the lock barrel (6) being capable of being locked at least in its assembly position for the lock barrel (6) by means of a lock device (20, 21) which can be rendered inoperative, characterized in that locking device (20, 21) has a locking member (22, 23) adapted for a spring loaded (30, 41) movement towards the gearwheel (10), the locking member (22, 23) being capable of being interlocked with the teeth of the gearwheel (10) constructed as a toothed gearwheel and/or with a catch housing (38) on the gearwheel (10).
