Abstract (en)
[origin: EP0096588A2] A door assembly comprises a frame (9) defining an aperture, a door (1) for closing the aperture, and a sealing assembly (20) disposed along at least one and preferably all the edges of the door (1) for sealing the door in the aperture. The sealing assembly (20) comprises a generally hollow deformable sealing member (5) which is mounted in a channel member (4) and extends therefrom in a direction parallel to the plane of the door (1). The sealing member (5) is of pear-shaped cross-section and is capable of a shearing movement as the door (1) is closed.
