Abstract (en)

[origin: EP0097011A2] The invention relates to a method of entraining a fibrous material in a fluid stream by forming a plug of the fibrous material, progressively removing particulate portions from said plug, e.g. by shredding, and admixing said particulate portions with a fluid stream for entrainment thereby. The fibrous material is preferably compacted to form a substantially fluid type plug. Means may be provided for introducing additives and/or binders into said fluid stream either before or after entrainment of said fibrous material.
