Abstract (en)

[origin: EP0097088A1] According to the invention, it comprises a ballasting system, one end of said pontoon being connected to a quay and another end being adjacent to said ship, and it is characterized in that said end (4) of the pontoon (1), on the quay side (5), has a unilateral connection with the latter, by simply bearing thereon, and in that said ballasting system (3) is such that said end (4) of the pontoon (1), on the quay side (5) exerts continuously on the latter a downward pressure force, independently of the relative position of the rolling loads or overloads R on the pontoon (1), within the limits of maximum admissible rolling loads or overloads corresponding to said ballasting system (3). The invention is particularly applied to harbor equipment.
