Abstract (en)  
A powder container wherein a cover (3) for opening part (1a) for letting contained powder flow out sealed by a film-like sealing member 2 is moved to open so that the sealing member (2) is peeled off with the motion of opening of said cover (3). One end of the sealing member (2) is connected to the cover (3) and the other end thereof to the container (1). The cover 3 is slidable along a bottom surface of the opening part (1a) of the container (1). The cover (3) is provided with a lever member (4) having a movable arm (4a) and an acting arm (4b), which peels off the sealing member (2) as the cover (3) slides.
