Abstract (en)

[origin: EP0097601A2] This mould has, on at least one of its faces, and more generally on two consecutive faces, one or more walls (2, 3, 4, 5) which can move translationally in order to move from an advanced position corresponding to the moulding of the resistant load-bearing portion (B1) of the block (B), to a retracted position corresponding to the moulding of an insulating layer (B2) applied against one or more faces of the resistant load-bearing portion, in the same operation and before the complete setting of the said load-bearing portion. <IMAGE>
